Patent No. 6274718
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Travis, James
APPLICANT: Barr, Philip J.
APPLICANT: Pavloff, Nadine
TITLE OF INVENTION: Porphyromonas gingivalis
TITLE OF INVENTION: Arginine-specific Proteinase Coding Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 1704;

Porphyromonas gingivalis genes and proteins – used in the detection and vaccination against periodontal disease.

Claim 4; Page 110-112; 153pp; English.

HArep3 (AAR96023) is the product of the HArep3 repeat unit (AAF30647) of the hagA gene (AAF30654) of P. gingivalis 318. It forms part of haemagglutinin hagA (see also AAF96030). HArep3 and other hagA repeat unit products (see also AAF9601-22 and AAF96024) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows product live vaccine. HArep1-4 can also be used to detect the presence of anti-P. Gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-0CT-2003 to standardise OS field)

HAREP2 (AAR96022) is the product of the HAREP2 repeat unit (AAT30646) of the hagA gene (AAT30654) of P. gingivalis 318. It forms part of haemagglutinin hagA (see also AAR96030). HAREP2 and other hagA repeat unit products (see also AAR96031 and AAR96023-24) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows product ive vaccine. HAREP1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as associated with vaccines against periodontal disease.
                                                                                                                                                                                                                                                                                                               encoding haemagglutinin and/or

                                                                                                                                                                                                              This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241 VVASFSWNGMALNPDNYLISKDVTGATKVKXYYAVNDGFPGDHYAVMISKTGTNAGDFTV 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagh haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  301 VFEETPNGINKGGARFGLSTEADGAKPQSVWIERTVDLPAGTKYVAFRHYNCSDLNYILL 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           P. gingivalis 381 haemagglutinin hagA (AAR96030) was identified as the product of the hagA gene (AAT30654) isolated as an EcoRV fragment of genomic DNA. The haemagglutinin, or portions of it (see also AAR96021-24), can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the detection and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HARPD1 (AAR36621) is the product of the HARPD1 repeat unit (AAT30645) of the hag4 gene (AAT30654) of P. gingivalis 318. It forms part of haemagglutinin hag4 (see also AAR96030). HARPD1 and other hag4 repeat unit products (see also AAR96030-24) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonalla cells allows produ. of live vaccine. HARPD1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                   HARPP4 (AAR96024) is the product of the HARPP4 repeat unit (AAT30648) of the hagA gene (AAT30654) of P. gingivalis 318. It forms part of meamaggluthin hagA (see also AAR96020). HARPP4 and other hagA repeat unit products (see also AAR96021-23) can be obtd. from transformed host cells and used as vaccines to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. of live vaccine. HARPP1-4 can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                    This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagA haemagglutinin protein. The polypeptides are used to produce antibodies to organisms associated with periodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             P. gingivalis 381 haemagglutinin hagE (AAR96033) was identified as the product of a gene (AAT30656) identified in P. gingivalis 318 genomic DNA. The haemagglutinin can be obtd. from transformed host cells and used as a vaccine to protect humans or animals against periodontal disease. Expression in Salmonella cells allows prodn. Of a live vaccine. The haemagglutinin can also be used to detect the presence of anti-P. gingivalis antibodies and to raise monoclonal antibodies for diagnostic appln. AG (AG-2) were isolated from P. gingivalis strains H66 (ATCC 33277) and W50 (ATCC 53973). The sequences of the proteins were used to design PCR primers and probes to isolate AG DNA. Lambda DASH and lambda ZAP libraries were screened with a probe based on amino acids 11-22 of the AG protein to obtain DNA encoding AG-1 (AAQ03484) and AG-2 (AAQ03489). AG-2 correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is encoded by a Porphyromonas gingivalis gene of the invention. This sequence represents the hagE haemagglutinin protein. I polypeptides are used to produce antibodies to organisms associated wiperiodontal disease. The antibodies are also used in purification and identification procedures. The genes and polypeptides are used as vaccines against periodontal disease
